

Junior Koders Roblox Development 1

Lesson 15 – Healing Item

Duration: 90 Minutes

Description:

Students will grasp healing item mechanics in Roblox, enhancing character health in a labyrinth game through tick method, trap script, and object interaction, culminating in implementing a healing system in their project.

Learning Objectives:

Students will:

1. Describe what is healing item, and how to use it in roblox studio
2. Identify the basic of healing item objects in roblox studio
3. Explain the sequences to use healing item in roblox studio
4. Organize the code and objects to implement a healing system
5. Create a simple heal system by utilizing the function, and methods using the script and coding skill with roblox studio

Tools:

1. Roblox studio

Class Structure

Duration	Topic
5 mins	Introduction
5 mins	Goals & Objectives
5 mins	Healing Item Introduction
5 mins	Stage Design
10 mins	The Traps
10 mins	Healing Items
15 mins	Script Setup
15 mins	Trap Script
15 mins	Heal Items Script
5 mins	Wrap Up

Structure's Key Indicator:

1. Interactive sequences:
Maintain involvements and understanding
2. Showcase: Brainstorm & Attract curiosity

Planned Activities

Resources

Introduction (5 mins)

Greetings and warm welcome:

- Welcome the students. Be cheerful and don't forget to smile.
- Let them recount the previous lesson and its key points
- Opening presentation link: [here](#)

Goals & Objectives (5 mins)

- Explain today's objectives and purposes of it in real scenario:
 - o Accelerates player progression with swift recovery.
 - o Enhances engagement by dynamic item interaction.
 - o Fosters immersion through interactive player experience.

Healing Item Introduction (5 mins)

- Describe the importance and benefits of healing item
- Have the students express their opinion about the healing item.

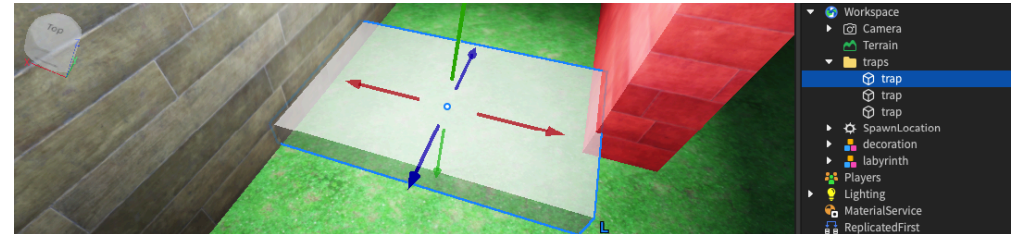

Stage Design (5 mins)

- Acquire desired stage design for project setup.
- Utilize toolbox objects for basic object samples.

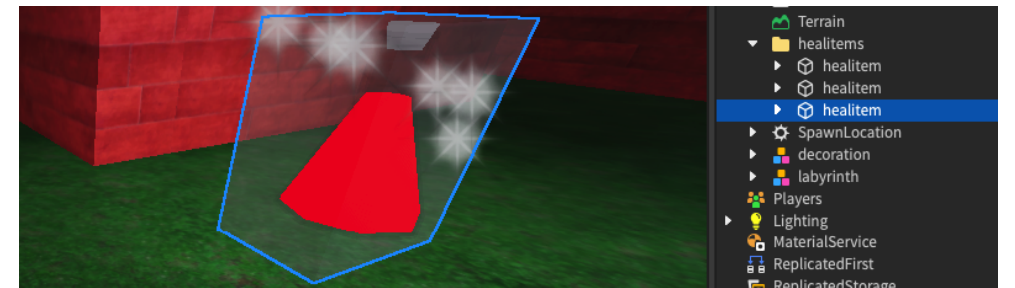

The Traps (10 mins)

- Demonstrate trap design methods for player visibility.
- Apply object property customization learned previously.

Healing Items (10 mins)

- Introduce healing items to trigger game function.
- Use part for hitbox in creating the healing items.

Script Setup (15 mins)

- Demonstrate setting up the script in server script service.
- Instruct students to organize objects in variables for clarity.

```
local traps = workspace:FindFirstChild("traps",true)
local healitems = workspace:FindFirstChild("healitems",true)
local ourcounter = tick()
local function addleaderstats(enteringplayer)
    local function gamesystem (thecharactermodel)
        local enteringplayerhumanoid = thecharactermodel:WaitForChild("Humanoid")
        local function humanoidfunctions(touchedobject)
            end
            enteringplayerhumanoid.Touched:Connect(humanoidfunctions)
        end
        enteringplayer.CharacterAdded:Connect(gamesystem)
    end
    game.Players.PlayerAdded:Connect(addleaderstats)
```

Trap Script (15 mins)

- Introduce trap script for object instruction application.
- Guide students in applying trap script to objects.

```
if touchedobject.Parent == traps then
    local functioncounter = tick()
    if functioncounter - ourcounter >= 5 then
        enteringplayerhumanoid.Health -= 80
        ourcounter = tick()
    end
end
```

Heal Items Script (15 mins)

- Introduce heal system for drop game functionality.
- Explain activating heal item script for debugging.

```
elseif touchedobject.Parent == healitems then
    enteringplayerhumanoid.Health += 50
    touchedobject:Remove()
end
```

Wrap Up (5 mins)

- Sum up by asking questions, clarify and confirm the students remember the most important things.

❤️⭐ Good Luck With The Class !! ⭐❤️
