JUNIOR KODERS ROBLOX DEV.

LESSON 14

HEALING ITEM

Dear Parents

Today your child learned and practiced:

- Understanding tick method with Roblox Studio
- Understanding time stamps with Roblox Studio
- Understanding basic heal system with Roblox Studio
- Create their own project using Roblox Studio

Those skills benefit student's development by:

- Understanding design and 3D perspective
- Improving students creativity
- Learning the interface of Roblox Studio
- Improving problem solving skills

Example of Project:

Main Objective: In this lesson, the main objective is to make the students understand the basics of the healing system with Roblox Studio. Using the health and tick method to create a labyrinth game project by utilizing the script, they also learn basics to set it up with Roblox Studio

Key Concepts:

```
if touchedobject.Parent == traps then
    local functioncounter = tick()
    if functioncounter - ourcounter >= 5 then
        enteringplayerhumanoid.Health -= 80
        ourcounter = tick()
    end

elseif touchedobject.Parent == healitems then
    enteringplayerhumanoid.Health += 50
    touchedobject:Remove()
end
```

For today's lesson, we will learn to create a heal item game project based on the health properties and tick method with Roblox Studio. Students will learn about the heal system with the lua programming language in Roblox Studio and learn basic syntaxes to recover health. With the activities students learn to use the humanoid and tick syntax implementation in the project.

How to revise the material at home:

- Ask your child to show the project / visit the folder with projects and see results.
- Congratulate your child that they can finish today's lesson nicely and support them to continue learning.

Did you know that...

At KodingNext we use Roblox Studio, a tool developed by Roblox, that lets you create and distribute content for Roblox quickly, easily, and conveniently. Roblox Studio is an excellent videogame creation tool that not only lets you give free rein to your imagination and create all sorts of content; you can also sell your creations and earn money.

Please note that we adjust the pace of our courses to students' needs and some students might need more practice to learn and some receive extra tasks which might not be included in this information sheet.
