

Junior Koders Roblox Development 1

Lesson 14 – Healing Item

Description:

Students will learn about the healing item in roblox which will increase their health value, and they will implement it in a simple labyrinth game by using the tick method, trap script, and how to make the object increase character health after we touch the heal item. At the end of the lesson they will create a simple labyrinth project which contains the healing items and how to function the codes so the healing system could be applied in their project.

Learning Objectives:

Students will:

1. Describe what is healing item, and how to use it in roblox studio
2. Identify the basic of healing item objects in roblox studio
3. Explain the sequences to use healing item in roblox studio
4. Organize the code and objects to implement a healing system
5. Create a simple heal system by utilizing the function, and methods using the script and coding skill with roblox studio

Tools:

1. Roblox studio

Duration: 90 Minutes

Class Structure

Duration	Topic
5 mins	Ensure The Preparation
5 mins	Connect The Objectives
5 mins	Healing Item Introduction
5 mins	Stage Design
10 mins	The Traps
10 mins	Healing Items
15 mins	Script Setup
15 mins	Trap Script
15 mins	Heal Items Script
5 mins	Wrap Up

Structure's Key Indicator:

1. Interactive sequences:
Maintain involvements and understanding
2. Showcase: Brainstorm & Attract curiosity

Planned Activities

Resources

Introduction (5 mins)

Greetings and warm welcome:

- Start the slides and video recording
- Inform the permissions before the lesson starts
- Ensure the students are prepared and ready for the day

Opening presentation link: [here](#)

Reminder:

- Welcome the students with a brief introduction, friendly attitude and smile at our best. Good luck in the class!

Connect The Objectives (5 mins)

Be a good listener with a fun atmosphere:

- Let them recount their previous meeting
- Explain their objectives:
 - o Describe what is healing item, and how to use it in roblox
 - o Identify the basic of healing item objects in roblox studio
 - o Explain the sequences to use healing item in roblox studio
 - o Organize the code and objects to implement a healing system
 - o Create a simple heal system by utilizing the function, and methods, by utilizing the script and coding skill with roblox studio
- Explain the methods and approaches to achieve the objectives:
 - o clarify the objectives, brief apperception
 - o brief orientation, practice and live guidance
 - o create, save, and upload completed project for documentation

Reminder:

- Connecting their objectives with the previous meeting will guide the students with sequential thinking approach which benefits their problem solving skill
- Ensure the students have the same chance to communicate their understanding about the lesson to strengthen their memorial abilities
- Never get bored to encourage the students to learn based on the objective and benefits they could achieve in the class, since motivation affects their productivity

Healing Item Introduction (5 mins)

- Ask students if they know about the healing item in roblox?
- Show the students about today's project that we are going to create a healing item project using scripts in roblox studio.
- Explain to the students that a heal item game could be used to improve our creativity and programming skill in the project.
- There are components to create the heal item game, which is the objects, and the script to implement it

Stage Design (5 mins)

Show & Explain

- Show the students that we need to get the stage design that we want to be exist in our project as the stage design
- Explain to students we can use the toolbox object and for this start basic sample we can use it in our project
- Also set up the stage design location so we want it to be in the workspace of our project.

Individual Task

- Let the students try to get the the stage design from the toolbox so they can understand how improve their designing skill

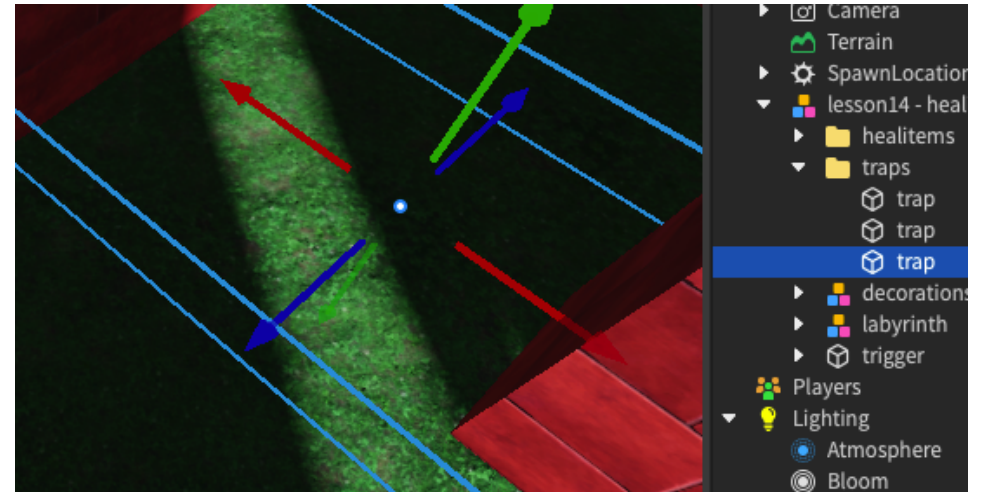

The Traps (10 mins)

Show & Explain

- Show the students the methods to design the traps so we can recognize that any player can see it in the workspace
- Explain to students the object properties is already learned from the previous lesson so we can do some customization
- We can set the objects to the workspace so we can make it customizable in our project

Individual Task

- Let the students try to design the traps, and the objects they designed will be the approach for player to next progress

Healing Items (10 mins)

Show & Explain

- Show the students that we will use the healing items to make sure the game function is triggered with this part
- Explain to students to create the healing items so they could utilize it to start the game function
- This healing items could be created from some parts in the toolbox and we can blend our creativity within it

Individual Task

- Let the students try to create the healing items, and the project codes will be activated based on our script later on

Script Setup (15 mins)

Show & Explain

- Show to students to setup the script which will be used to setup the objects inside our workspace in our script
- Explain the students to set up the objects we need inside a variable to make the code is readable
- The code result will be used inside the game so make sure to avoid typo for easier coding purpose

Individual Task

- Let the students do the script setup to make sure it could be used for the objects needed in our project

```
local traps = workspace:FindFirstChild("traps", true)
local healitems = workspace:FindFirstChild("healitems", true)
local ourcounter = tick()
local function addedplayerinservice(enteringplayer)
    local function gamesystem(enteringplayermodel)
        local enteringplayerhumanoid = enteringplayermodel.Humanoid
        local function humanoidfunctions(touchedobject)
            end
            enteringplayerhumanoid.Touched:Connect(humanoidfunctions)
        end
        enteringplayer.CharacterAdded:Connect(gamesystem)
    end
    game.Players.PlayerAdded:Connect(addedplayerinservice)
```

Trap Script (15 mins)

Show & Explain

- Show the students that we will make the trap script in our project to apply instructions for some objects.
- Explain the students to make the trap script, then apply it for the objects we will use in this project
- The trap script object means each object inside the script will be passed with the script based on the according objects.

Individual Task

- Let the students try to do the trap script to apply instructions for some objects we will use

```
if touchedobject.Parent == traps then
    local functioncounter = tick()
    if functioncounter - ourcounter >= 5 then
        enteringplayerhumanoid.Health -= 80
        ourcounter = tick()
    end
```

Heal Items Script (15 mins)

Show & Explain

- Show to students that we also add heal system to make the drop game works as expected and the script has no bugs
- Explain to the students that if the heal item script is used, then the script will be activated in our roblox project.
- The script will check if the variable is declared accordingly, also the function is called and activated, if not then a bug exists.

```
elseif touchedobject.Parent == healitems then
    enteringplayerhumanoid.Health += 50
    touchedobject:Remove()
end
```

Individual Task

- Let them finish the heal items script, and congratulate them for finishing the activity for this meeting

Wrap Up (5 mins)

- Sum up by asking questions, clarify and confirm the students remember the most important things.
- Ask the students if they have more questions to get contact by whatsapp / class group / watch the zoom video recording
- Tell the students to upload their project
- Thank the students for doing a great job.
- Send the zoom video recording

❤️⭐ Good Luck With The Class !! ⭐❤️
